GLASS TYPES WITH THE LOW-E GLASS

Low-E, or low-emissivity, glass was created to minimize the amount of infrared and ultraviolet light that comes through glass, without minimizing the amount of light that enters the home. Low-E glass windows have a microscopically thin coating that is transparent and reflects heat.

Grey Low – E/ Clear Low-E/ Bronze Low-E:

When a piece of glass that would either go in a Sliding glass door / Window has Low-E added to it, it will look different from a normal piece of glass that does not have it, When Low-e is added to a window it will give the window/sliding glass door a greenish hue when the sun or light hits the window just right.
